Assessment Protocol for Cross-Reynolds Deployment (Y^+-resolved)

a)

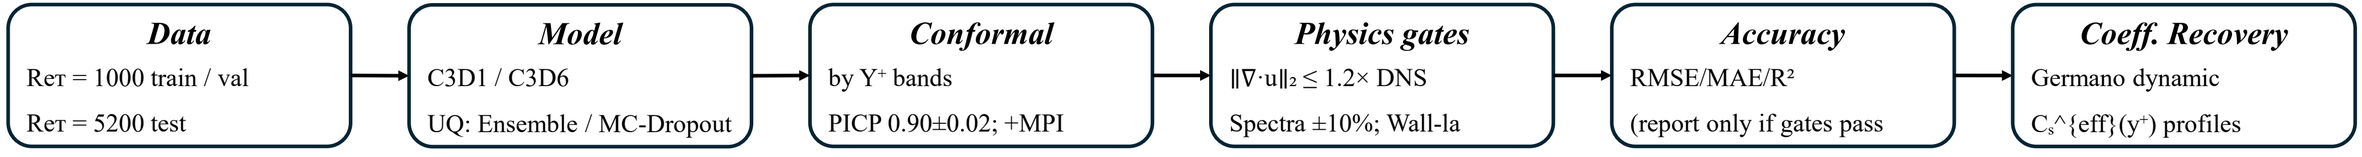

Normalisation fixed from Reτ =1000 (train); thresholds reported per band

c) *Band-wise outcome summary (numbers are illustrative)*

Band	***PICP@90***	***ECE***	***‖ ∇·u ‖₂***	***Spectra Δ %***	***Wall-law Δ***	***RMSE***
Y^+ (0 – 30)	*0.91*	*0.03*	*OK*	*6%*	*OK*	*0.085*
Y^+ (30 – 100)	*0.90*	*0.04*	*OK*	*12%*	*OK*	*0.092*
Y^+ (100 – 370)	*0.88*	*0.06*	*OK*	*7%*	*OK*	*0.110*
Y^+ (370 – 1000)	*0.85*	*0.07*	*FAIL*	*8%*	*FAIL*	–

b)

Decision rule: *If any physics gate fails in a Y^+ band → omit RMSE/MAE for that band; report the failure.*

Reporting order: *Coverage → Physics → Accuracy → C_s^{eff}(y^+)*
